

Compliance Solved for Health Care Organizations

EVault® disk-to-disk backup and recovery technology, coupled with consulting and educational services, provides you with data protection that helps ensure compliance with the Health Insurance Portability and Accountability Act (HIPAA).

High Performance Backup and Recovery

The increasing complexity of your IT environment, especially the hyper-growth of data and applications, makes it essential that your backup and recovery system is at once high performing, easy to configure, and easy to use. EVault provides that in a unified solution that integrates with your systems seamlessly and scales readily as you grow. EVault backs up your core systems, networked environments, and mobile devices wherever they are, and no matter how complex.

Secure Processes

EVault complies with SSAE 16 standards. An annual audit and resulting report certifies our adherence to industry standards for physical security and internal controls for safeguarding data. If you back up to one of our nine top-tier data centers, you can provide documentation about this to an auditor or examiner.

HIPAA Compliance Using EVault

To comply with HIPAA, your organization must securely back up data, retain disclosures, provide physical and technical safeguards, and ensure disaster recovery. The EVault data protection platform simplifies this, with uncompromising performance, simplicity and a comprehensive breadth of application and platform support.

That's why more than 35,000 customers trust EVault.

HIPAA Implications for Data Retentions Addressed

Policies and Procedures	Offsite Storage	Data Availability	Security and Privacy	Retentions
Documented backup and recovery plan Emergency contingency planning Log reports	Patent-pending delta-processing technology enables high-performance WAN/LAN backup and recovery and optimizes storage Disaster Recovery testing	Immediate file and folder-level recovery File search to support regulatory audits Disaster recovery strategies and specialized services	End-to-end NIST-certified AES encryption SAS 70 Type II certified, Tier III and IV data centers Disk-based storage—no tape-based risk	Policy-based automated retentions may be set based on your needs File-level archiving Email and IM backup and archiving

HIPAA Compliance Checklist

<p>Rule on Security Standards: Administrative Safeguards <i>Data Backup and Disaster Recovery</i> Covered entities are responsible for backing up their data and establishing disaster recovery procedures. A contingency plan should be in place for responding to emergencies.</p>	✓	<p>EVault Software and EVault SaaS provide for secure, reliable online data protection. Tape-based risk is eliminated. You never lose your data.</p> <p>EVault Professional Services consultants help you develop a data protection strategy that assures you meet compliance requirements. This information is documented and delivered in a comprehensive data protection plan.</p>
<p>Privacy Rule: <i>Retention of Disclosures</i> Covered health care entities must keep track of disclosures of Protected Health Information (PHI) for a period of six years. This includes any part of a patient's medical record or payment history.</p>	✓	<p>EVault Software and EVault SaaS create a safe and secure secondary copy of patient data. Even after a system failure or site disaster, your organization will be able to retrieve patient documentation upon request.</p>
<p>Rule on Security Standards: Administrative Safeguards <i>Access to Records</i> Access to Electronic Protected Health Information (EPHI) must be restricted to only those employees who need it to complete their job function.</p>	✓	<p>EVault technology includes encryption in storage, as well as during transmission. Original versions of documents, once backed up, cannot be accessed except by authorized personnel. Data is encrypted before it leaves the firewall and remains that way. Not even EVault can access your organization's information.</p>
<p>Rule on Security Standards: Administrative Safeguards <i>Outsourcing</i> Covered entities that outsource some of their business processes to a third party must ensure that their vendors also have a framework in place to comply with HIPAA requirements.</p>	✓	<p>EVault complies with SSAE 16 standards.. An annual audit and resulting report certifies our adherence to industry standards for physical security and internal controls for safeguarding data. We can provide documentation about this should your organization be audited or examined.</p>
<p>Rule on Security Standards: Physical Safeguards Access to equipment containing health information should be carefully controlled and monitored, based on facility security plans, maintenance records, and visitor sign-in and escorts.</p>	✓	<p>EVault data centers are all provisioned Type III and IV, and comply with SSAE 16 standards.. Our offsite data centers meet the highest industry standards for security and data availability. Access is strictly limited and enforced.</p>
<p>Rule on Security Standards: Technical Safeguards When information flows over open networks, some form of encryption must be utilized.</p>	✓	<p>EVault AES encryption technology is NIST certified. It meets or exceeds all regulatory requirements including HIPAA.</p>
